ABSTRACT

In the existing leave management system every college follows manual procedure in which faculty enters information in a paper or in a book. It is difficult to maintain every faculty's leave information in the books and it is time taking to calculate the leaves of each person. Sometimes mistakes may also happen in the existing system. Here we introduce a web-based application for faculty leave management. The main purpose of this project is to reduce the paper work, time as today's world is mostly communicating through internet. Through this system faculty can access the web application from anywhere in the world and he/she can easily interact with the web application. In our proposed system the Head of the Department have the permissions to access and approve the leave of faculty. Based on the availability of leaves the Head of the Department will grant the permission for faculty. There is no chance for mistakes in calculating the leaves with our proposed system.
